

Lehigh Valley Hospital uses hai520 low latency codecs to bring high school students into the operating room!!!

News brief from http://www.lvh.org/lvh/Your_LVH%7C2337.

Not Your Typical Biology Class – As the baby took its first breath and started crying in the operating room at LVH—Cedar Crest, down the road at the DaVinci Discovery Center, a room full of high school students cheered. In partnership with the Lehigh Career and Technical Institute, and the DaVinci Discovery Center, the students watched the live cesarean section birth as part of the new “Live from LVH: Operation C-Section” presentation. Designed to get more students interested in health care careers, the presentation allows students to interact with OR staff and ask questions to experts like labor and delivery nurses Erika Linden, R.N., (left) and Michelle Adams, R.N.

HaiVision's **hai500 series** low latency encoder/decoder systems are the heart of today's premier telepresence suites and the backbone of the world's foremost telesurgery initiatives.
