

HaiVision Forms Strategic Alliance with Teliris

Montreal, Canada, April 18, 2005 – HaiVision Systems Inc. and Teliris Ltd. announce today that they have entered into a mutual agreement that will see HaiVision designing and delivering custom network video technologies for inclusion within Teliris' GlobalTable solution for Interactive Telepresence applications. This alliance is an extension of the long standing relationship between HaiVision and Teliris, whereby Teliris integrates HaiVision's hai500™ network video products within their conferencing application.

"This enhanced partnership will drive the development and integration of the next generation of interactive video systems for conferencing and broadband collaborative environments," commented François Gariépy, President of HaiVision Systems Inc.

Steve Gage, COO of Teliris Ltd., noted that, "we are very excited about expanding our relationship with HaiVision. We have agreed on specific developments that will enhance the GlobalTable Interactive Telepresence systems, including video encode and decode systems that take advantage of the latest standards and technologies."

Interactive Telepresence mirrors the experience of meeting with someone in real time, in the same space. The experience is a complete departure from that of traditional video conferencing.

Teliris' GlobalTable incorporates HaiVision's hai500 network video encoder and decoder technology to provide DVD quality video, CD quality audio, and reliable, real time, interactive collaboration. Within the GlobalTable environment, technology disappears, enabling true emotion, expression, and spontaneity.

About HaiVision Systems Inc.

Based in Montreal, Canada, HaiVision Systems Inc. is a global supplier of networked video technology for interactive true-to-life communications, mission critical network video transmission, and IP business video solutions. HaiVision's products and application appliances are used by telecom operators and systems integrators around the world to meet the demands of the highest quality broadband video applications.

About Teliris Ltd.

Established in February 2001, Teliris Ltd. is a spinoff of the network and directory services leader Mycroft Inc. Headquartered in New York and London, Teliris, using its GlobalTable meeting environment, simulates in-person meetings to an extent not achievable with traditional videoconferencing, while giving clients an extraordinary return on value. Among the many companies employing the GlobalTable solution are Lazard, Pearson plc, Vodafone, GlaxoSmithKline and Xchanging Ltd.
